The MAILING DATE of this communication app Period for Reply	ears on the cover sheet with the c	orrespondence address					
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.  - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.  - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.  - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## **DETAILED ACTION**

Page 2

## Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., In re Berg, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); In re Goodman, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); In re Longi, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); In re Van Ornum, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); In re Vogel, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and In re Thorington, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

- 2. Claims 1-9 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-3 of U.S. Patent No. 6,398,744. Although the conflicting claims are not identical, they are not patentably distinct from each other because it would have been obvious to leave out the details of the identification means from claim 1 and the details of the chest compression means from claim 2.
- 3. Claims 1-9 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-2 of U.S. Patent No. 6,690,969 in view of Halperin et al. '674. It would have been obvious to modify the patented claims to include a chest compression means as taught by Halperin to provide the complete CPR system.

## Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Morgan et al. '426 in view of Halperin et al. '674.
- 6. Morgan teaches details of the defibrillation system to be used for CPR patients that uses a communication system so that first responders can communicate with health care professionals. First responders to a heart attack victim don't usually have the proper knowledge to operate a CPR system including a defibrillation device. Therefore there is need for a communication system so that first care responders can communicate with health care professionals. Morgan also teaches that a security system may be needed to prevent unauthorized individuals from operating the system, column 6, lines 52-67. The communication station sends a return signal to the defibrillator authorizing the operation of the system. This communication system provides an identification means for identifying the first responder as a legitimate need for operating the device and the computer system to then accept an authorizing signal from the communication station to functionally enable the device. While Morgan teaches the device is for use in heart attack victims for first responders to administer CPR, Morgan fails to teach how one is to administer the chest compression part of CPR.
- 7. Halperin teaches the combination of using a chest compression device with defibrillation electrodes and a controller operating both. It would have been obvious to one of ordinary skill in

Application/Control Number: 10/776,299

Art Unit: 3764

299 Page 4

the art to modify Morgan to include a chest compression device as taught by Halperin to complete the operation of administering CPR.

- 8. Claims 2-5, 7-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Morgan et al. '426 in view of Arand et al. '617.
- 9. Arand teaches that it is desirable for the automatic external defibrillators (AED) to have at least two different levels of access. One level is for first responders to have access to an automated mode for basic life support operation and a second mode restricted to manual functions to qualified advanced cardiac life support (ACLS). Arand teaches restricting access to the manual mode by using a software pass code, column 3, lines 59-61. As noted above Morgan teaches the communication system that unlocks the AED once the communication station authorizes physical access to the device. It would have been obvious to one of ordinary skill in the art to modify Morgan to prohibit functional enablement to the first operator and permit functional enablement of the device to a second operator as taught by Arand to logically segregate and restrict access to manual function to qualified ACLS personnel.
- 10. Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over the references as applied to claim 2 above, and further in view of McGrady et al. '593.
- 11. Arand teaches using a software pass code to access different levels of operation.

  McGrady teaches using an access card reader as an example of a software pass code. It would have been obvious to one of ordinary skill in the art to further modify Morgan to use a card reader as taught by McGrady as an example of using a software pass code to determine the level of access.

12. Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Danton DeMille whose telephone number is (571) 272-4974.

The examiner can normally be reached on M-Th from 8:30 to 6:00. The examiner can also be

reached on alternate Fridays.

13. If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Greg Huson, can be reached on (571) 272-4887. The fax phone number for the

organization where this application or proceeding is assigned is 703-872-9306.

14. Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR

system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
